**TEST REPORT**  
**BS EN 62368-1**  
**Audio/video, information and communication technology equipment**  
**Part 1: Safety requirements**

Report Number.....: LCSA09294073S

Date of issue.....: 2024-11-08

Total number of pages.....: 87

Name of Testing Laboratory preparing the Report.....: Shenzhen LCS Compliance Testing Laboratory Ltd.

Applicant's name.....: Suparo Industries Ltd

Address.....: Weir Street, Blackburn, BB2 2AN, United Kingdom

**Test specification:**

Standard.....: BS EN IEC 62368-1:2020+A11:2020

Test procedure.....: Type test

Non-standard test method.....: N/A

TRF template used.....: IECEE OD-2020-F1:2021, Ed.1.4

Test Report Form No.....: TRF-4-S-132 A/0

Test Report Form(s) Originator.....: UL(US)

Master TRF.....: Dated 2022-04-14

**List of Attachments (including a total number of pages in each attachment):**

- Attachment No. 1: Britain group differences and national differences.
- Attachment No. 2: Photo Documentation

**Summary of testing:****Tests performed (name of test and test clause):**

The submitted samples were found to comply with the requirements of:

**Electrical safety:**

- BS EN IEC 62368-1:2020+A11:2020

**Testing location:**

Shenzhen LCS Compliance Testing Laboratory Ltd.  
Room 101, 201, Building A and Room 301, Building C, Juji Industrial Park, Yabianxueziwei, Shajing Street, Bao'an District, Shenzhen, Guangdong, China

**Summary of compliance with National Differences:****List of countries addressed: National Differences and Group Differences as refer to Attachment No. 1.**

- The product fulfils the requirements of **BS EN IEC 62368-1:2020+A11:2020**

**Use of uncertainty of measurement for decisions on conformity (decision rule):**

No decision rule is specified by the IEC standard, when comparing the measurement result with the applicable limit according to the specification in that standard. The decisions on conformity are made without applying the measurement uncertainty ("simple acceptance" decision rule, previously known as "accuracy method").

Other: (to be specified, for example when required by the standard or client, or if national accreditation requirements apply)

**Information on uncertainty of measurement:**

The uncertainties of measurement are calculated by the laboratory based on application of criteria given by OD-5014 for test equipment and application of test methods, decision sheets and operational procedures of IECEE.

IEC Guide 115 provides guidance on the application of measurement uncertainty principles and applying the decision rule when reporting test results within IECEE scheme, noting that the reporting of the measurement uncertainty for measurements is not necessary unless required by the test standard or customer.

Calculations leading to the reported values are on file with the NCB and testing laboratory that conducted the testing.

Copy of marking plate:

The artwork below may be only a draft. The use of certification marks on a product must be authorized by the respective NCBs that own these marks.

**45W Dual USB-C Wall Charger**  
Model: S45D  
Input: 100V-240V 50/60Hz 1.5A Max  
USB-C1/C2 Output: 5.0V=3.0A, 9.0V=3.0A,  
12.0V=3.0A, 15.0V=3.0A, 20.0V=2.25A Max 45W  
PPS: 3.3V-11V=4.05A  
USB-C1+C2 Output: Total 40W (20W+20W)  
Suparo Industries Ltd.  
Weir Street, Blackburn, BB2  
2AN, United Kingdom  
Made in China  
Manufacturer: Foshan G-Power Technology Co.,LTD  
B4-601, 602, 603, 604, 702, 704, SXC, No. 1 Fusheng  
West Road, Dafuji Community, Ronggui Street, Shunde  
District, Foshan City, 528300,  
Guangdong Province, China

Note:

1. For the final production samples, the additional markings which do not give rise to misunderstanding may be added.
2. The height of CE and UKCA symbol  $\geq 5.0\text{mm}$ , the height of WEEE symbol  $\geq 7.0\text{mm}$ .
3. The importer information should be marked in label when this product import to European Marketing.
4. The model no. on above marking plate may be replaced by other ones listed in the report.

**Test item particulars:**

**Product group** ..... :  end product     built-in component

**Classification of use by**..... :  Ordinary person  
 Instructed person  
 Skilled person  
 Children likely to be present

**Supply connection**..... :  AC Mains     DC Mains  
 External Circuit - not Mains connected  
-  ES1     ES2     ES3

**Supply tolerance** ..... :  +10%/-10%  
 +20%/-15%  
 + \_\_\_ %/ - \_\_\_ %  
 None

**Supply connection – type** ..... :  pluggable equipment type A -  
 non-detachable supply cord  
 appliance coupler  
 direct plug-in  
 pluggable equipment type B -  
 non-detachable supply cord  
 appliance coupler  
 permanent connection  
 mating connector  
 other: Not directly connected to the mains

**Considered current rating of protective device**..... : 16A  
location:  building;  equipment;  N/A

**Equipment mobility**..... :  movable     hand-held     transportable  
 direct plug-in     stationary     for building-in  
 wall/ceiling-mounted     SRME/rack-mounted  
 other:

**Overtoltage category (OVC)** ..... :  OVC I     OVC II     OVC III  
 OVC IV     other:

**Class of equipment** ..... :  Class I     Class II     Class III  
 Not classified   

**Special installation location** ..... :  N/A     restricted access area  
 outdoor location

**Pollution degree (PD)** ..... :  PD 1     PD 2     PD 3

**Manufacturer’s specified T<sub>ma</sub>**..... : 25 °C     Outdoor: minimum    °C

**IP protection class** ..... :  IPX0     IP \_\_\_

**Power systems** ..... :  TN     TT     IT - \_\_\_ V L-L  
 not AC mains

**Altitude during operation (m)** ..... :  2000 m or less     \_\_\_\_\_ m

|                                       |   |                                  |
|---------------------------------------|---|----------------------------------|
| Altitude of test laboratory (m) ..... | <input checked="" type="checkbox"/> 500 m or less | <input type="checkbox"/> _____ m |
| Mass of equipment (kg) .....          | <input checked="" type="checkbox"/> 0.092 kg      |                                  |

**Possible test case verdicts:**

- test case does not apply to the test object.... : N/A
- test object does meet the requirement..... : P (Pass)
- test object does not meet the requirement.... : F (Fail)

**Testing:**

Date of receipt of test item..... : 2024-10-08

Date (s) of performance of tests..... : 2024-10-08 to 2024-11-07

**General remarks:**

"(See Enclosure #)" refers to additional information appended to the report.  
 "(See appended table)" refers to a table appended to the report.

Throughout this report a  comma /  point is used as the decimal separator.  
 The applicant and manufacturer information, product name, model, trademark and other information in this report are all provided by the applicant, and this laboratory is not responsible for verifying its authenticity.

These marked "☆" test clauses are not within the scope of CNAS recognition.

**Manufacturer's Declaration per sub-clause 4.2.5 of IEC60335-1:**

|  |  |
|--|--|
| The application for obtaining a CB Test Certificate includes more than one factory location and a declaration from the Manufacturer stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory has been provided..... : | <input type="checkbox"/> Yes<br><input checked="" type="checkbox"/> Not applicable |
|--|--|

**When differences exist; they shall be identified in the General product information section.**

Name and address of factory (ies)..... : Same as Manufacturer

**General product information and other remarks:**

1. The product is class II 45W Dual USB-C Wall Charger intended to use for information technology equipment or Audio and Video equipment.
2. The maximum ambient temperature is 25°C.
3. This equipment is intended to operate in an area which has an elevation of maximum 2000m.
4. All models are identical to each other except for model name, unless otherwise specified, all tests are performed on model S45DB.

| F.3.10      | Test for permanence of markings   | The label was subjected to the permanence of marking test. The label was rubbed with cloth soaked with water for 15 sec. And then again for 15 sec, with the cloth soaked with petroleum spirit. After this test there was no damage to the label. The marking on the label did not fade. There was no curling and lifting of the label edge. After each test, the marking remained legible. | P       |

Supplementary information:  
 An Arcing PIS requires a minimum of 50 V (peak) a.c. or d.c. An Arcing PIS is established when the product of the open circuit voltage ( $V_p$ ) and normal operating condition rms current ( $I_{rms}$ ) is greater than 15.  
 All conductors and devices are considered as PIS.

 A combination of voltmeter, VA and ammeter IA may be used instead of a wattmeter.

| IEC 62368-1 |                    |                 |         |
|-------------|--------------------|-----------------|---------|
| Clause      | Requirement + Test | Result - Remark | Verdict |

If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine Resistive PIS classification.

A Resistive PIS: (a) dissipates more than 15 W, measured after 30 s of normal operation, or (b) under single fault conditions has either a power exceeding 100 W measured immediately after the introduction of the fault if electronic circuits, regulators or PTC devices are used, or has an available power exceeding 15 W measured 30 s after introduction of the fault.

All conductors and devices are considered as PIS.

Supplementary information:

\* Temperature limit for TS1 of accessible enclosure according to Table 38 to be measured at normal ambient temperature.

Note 1: The apparatus was submitted and evaluated for maximum manufacturer's recommended ambient (T<sub>ma</sub>) of 25°C.

Note 2: The temperatures were measured under the worst case normal mode defined in clause B.2.1.

Note 3. Temperature limits are calculated as follows:

Winding components providing safety isolation:

Class B → T<sub>max</sub> = 120 - 10 = 110°C

| Temperature T of winding: | t <sub>1</sub> (°C) | R <sub>1</sub> (Ω) | t <sub>2</sub> (°C) | R <sub>2</sub> (Ω) | T (°C) | Allowed T <sub>max</sub> (°C) | Insulation class |

Supplementary information:

Test table is provided to record fault conditions for all applicable energy sources including Thermal burn injury. Column "Abnormal/Fault." Specify if test condition by indicating "Single Fault" then the condition for Clause B.4.

- 1) SC: Short-circuited; OC: Open-circuited; OL: Overload.
- 2) The test result shown all safeguards remained effective and didn't lead to a single fault condition during abnormal operating condition; In addition all safeguards complied with applicable requirements in this standard after restoration of normal operating conditions.
- 3) The test result showed no Class 1 or 2 energy source become Class 3 level during and after single fault condition.
- 4) For component damaged without fuse opened condition have been repeated twice (three tests total) with same result.
- 5) The tests where fuse opened were repeated with each source of fuse and with same result observed.

An external protective device rated 32A was used to protect against excessive currents and short-circuits in the primary circuit supplying the EUT during all fault tests.

| <b>2</b>                 | <b>Modification to Clause 10</b>   |                 | N/A     |
| <b>10.6</b>              | <b>Safeguards against acoustic energy sources</b><br>Replace 10.6 of IEC 62368-1 with the following:   |                 | N/A     |
| <b>10.6.1.1</b>          | <p><b>Introduction</b></p> <p><b>Safeguard</b> requirements for protection against long-term exposure to excessive sound pressure levels from personal music players closely coupled to the ear are specified below. Requirements for earphones and headphones intended for use with personal music players are also covered. A personal music player is a portable equipment intended for use by an <b>ordinary person</b>, that:</p> <ul style="list-style-type: none"> <li>– is designed to allow the user to listen to audio or audiovisual content / material; and</li> <li>– uses a listening device, such as headphones or earphones that can be worn in or on or around the ears; and</li> <li>– has a player that can be body worn (of a size suitable to be carried in a clothing pocket) and is intended for the user to walk around with while in continuous use (for example, on a street, in a subway, at an airport, etc.).</li> </ul> <p>EXAMPLES Portable CD players, MP3 audio players, mobile phones with MP3 type features, PDAs or similar equipment.</p> <p>Personal music players shall comply with the requirements of either 10.6.2 or 10.6.3.</p> <p>NOTE 1 Protection against acoustic energy sources from telecom applications is referenced to ITU-T P.360.</p> <p>NOTE 2 It is the intention of the Committee to allow the alternative methods for now, but to only use the dose measurement method as given in 10.6.5 in future. Therefore, manufacturers are encouraged to implement 10.6.5 as soon as possible.</p> <p>Listening devices sold separately shall comply with the requirements of 10.6.6.<br/>These requirements are valid for music or video mode only.<br/>The requirements do not apply to:</p> <ul style="list-style-type: none"> <li>– professional equipment;</li> </ul> |                 | N/A     |

## Attachment No.1

| IEC 62368-1 _ ATTACHMENT |   |                 |         |
|--------------------------|---|-----------------|---------|
| Clause                   | Requirement + Test  | Result - Remark | Verdict |
|                          | <p>This standard is transitioning from short-term based (30 s) requirements to long-term based (40 hour) requirements. These clauses remain in effect only for devices that do not comply with sound dose estimation as stipulated in EN 50332-3.</p> <p>For classifying the acoustic output <math>LA_{eq,T}</math>, measurements are based on the A-weighted equivalent sound pressure level over a 30 s period.</p> <p>For music where the average sound pressure (long term <math>LA_{eq,T}</math>) measured over the duration of the song is lower than the average produced by the programme simulation noise, measurements may be done over the duration of the complete song. In this case, <math>T</math> becomes the duration of the song.</p> <p>NOTE Classical music, acoustic music and broadcast typically has an average sound pressure (long term <math>LA_{eq,T}</math>) which is much lower than the average programme simulation noise. Therefore, if the player is capable to analyse the content and compare it with the programme simulation noise, the warning does not need to be given as long as the average sound pressure of the song does not exceed the required limit.</p> <p>For example, if the player is set with the programme simulation noise to 85 dB, but the average music level of the song is only 65 dB, there is no need to give a warning or ask an acknowledgement as long as the average sound level of the song is not above the basic limit of 85 dB.</p> |                 |         |
| 10.6.2.2                 | <p><b>RS1 limits (to be superseded, see 10.6.3.2)</b></p> <p>RS1 is a class 1 acoustic energy source that does not exceed the following:</p> <ul style="list-style-type: none"> <li>– for equipment provided as a package (player with its listening device), and with a proprietary connector between the player and its listening device, or where the combination of player and listening device is known by other means such as setting or automatic detection, the <math>LA_{eq,T}</math> acoustic output shall be <math>\leq 85</math> dB when playing the fixed “programme simulation noise” described in EN 50332-1.</li> <li>– for equipment provided with a standardized connector (for example, a 3,5 phone jack) that allows connection to a listening device for general use, the unweighted r.m.s. output voltage shall be <math>\leq 27</math> mV (analogue interface) or -25 dBFS (digital</li> </ul>   |                 | N/A     |
